

The Only Full Spectrum™ Pulsed Xenon UV Disinfection System

Xenex Germ-Zapping Robots are the fastest, most effective automated pesticidal device for the advanced cleaning of healthcare facilities, scientifically proven in peer-reviewed patient outcome studies to reduce all major classes of high risk pathogens, including C. diff and MRSA. Unlike mercury UV and hydrogen peroxide systems, Xenex robots produce broad spectrum ultraviolet C (UVC) that penetrates the cell walls of microorganisms, prevents mutation and kills organisms on surfaces without contact or chemicals in under 5 minutes.

For more information, call 800-553-0069, email us at info@xenex.com, visit www.xenex.com
