

## **Xenex exporting hospital-cleaning robots to Europe**

Xenex Disinfection Services has exported its Germ-Zapping Robots to hospitals in Spain and Portugal under a new agreement with Clece, Spain's leading health care cleaning and maintenance service company.

Clece will use Xenex's products to disinfect rooms at Vall d'Hebron University Hospital in Barcelona and Ramón y Cajal in Madrid.

Hospital officials in Europe, like their counterparts in America, are working to reduce the number of healthcare-associated infections in patients that are caused by bacteria like *Clostridium difficile*, *Staphylococcus aureus* and *Enterobacteriaceae*.

Xenex's products emit a high intensity ultraviolet light that destroys bacteria, viruses and spores. San Antonio-based Xenex's machines are currently in use at 300 hospitals, Veterans Affairs, Department of Defense, skilled nursing facilities, ambulatory surgery centers and long-term acute care facilities in the United States.
